

CONSTRUCTION CONTRACTS SOLUTIONS

Practical Solutions, Successful Partnerships

**Providing comprehensive
Civil Engineering and Groundwork Services**

MALCOLM CONSTRUCTION PROVIDES COMPREHENSIVE CIVIL ENGINEERING AND GROUNDWORK SERVICES.

We have earned an enviable reputation as a quality service provider, solving complex problems but moreover, for successfully delivering projects on either a stand-alone basis or as part of a consortia, offering a larger package to major contractors, local authorities and consulting engineers.

Malcolm Construction is in a unique position to provide end-to-end solutions to the most challenging construction projects by engaging with its specialist group companies. Among these is Charles Lawrence Surfaces, a leading technical innovator in the specialised field of synthetic sports surfacing; Woodholme Construction, leaders in laser controlled paving and specialist skills in the preparation and full construction of all-weather surfaces.

“ Our experience within the construction industry is wide and varied, working in partnership with high profile and well respected clients delivering a first class service. ”

Our scope of works embrace every aspect of the construction cycle from the initial site survey to liaising with the Project Engineer on land maximisation; re-profiling the earthworks to required design levels; drainage and roads; foundations and buildings; ground floor slab, surfacing and finally, any finishing touches required around the project. And, with a wealth of resources to call on, including our in-house training, health and safety and surveying departments, our management and contract team bring exceptional experience in all aspects of civil engineering to all contracts. This one-stop-shop approach is underpinned by our “get it right first time” attitude.

“ Our aim is simple, to provide quality installations at competitive prices delivered via a professional and approachable team. ”

SPORTS SURFACES

Malcolm Sports Surfaces is a leading technical innovator in the highly specialised field of synthetic sports surfaces. We offer complete turnkey solutions covering everything from the design and installation to the maintenance of synthetic sports projects.

Our portfolio includes Athletics Tracks, Football Pitches, Rugby Pitches, Tennis Courts and Multi-Use Games Areas (MUGAs).

Whatever the size of the project, consideration for quality, safety and care for the environment, underpins everything we do. Utilising partnering agreements with leading industry suppliers, we are able to offer the full range of synthetic, natural and state-of-the-art combination surfaces, to ensure best fit, optimum performance and life expectancy.

We also build leisure facilities and associated sports infrastructure, all designed, constructed and installed by our own highly skilled staff.

“ As part of The Malcolm Group, Charles Lawrence has unrivalled financial strength, providing clients with top class facilities backed by secure guarantees. ”

CHARLES LAWRENCE SPORTS SURFACES

CHARLES LAWRENCE
SURFACES

Charles Lawrence Surfaces have been at the forefront of the artificial sports surfacing industry since 1975, making it one of the most respected and long established names within the sector.

Its aim is simple - to provide quality installations at competitive prices, delivered via a professional and approachable team.

Synthetic turf can handle the most vigorous usage in all-weather conditions and our choice of synthetic turf systems offers performance, value, low maintenance requirement and durability. The company currently provides surfaces for a number of sports including Football, Tennis, Rugby, Athletics, Netball and Hockey as well as providing expertise on indoor multi-use sports halls.

WOODHOLME CONSTRUCTION

Malcolm Construction acquired Woodholme Construction in 2007, which has further strengthened their presence within the Sports Surfaces Industry.

From Woodholme Construction's origins, as pioneers of laser-controlled macadam paving, its scope of responsibilities within the Synthetic Sports Industry has grown enormously. It regularly undertakes complete groundwork, sub-structure, drainage and external works packages for multi-million pound projects such as schools and academies.

Woodholme Construction upholds all of Malcolm Construction's quality values and shares our attention

to detail. Whether its works involve minor repairs or the construction of a major international sporting venue, Woodholme Construction holds "premier" status within the sports and general surfacing sectors and has an enviable reputation for producing accurate, efficient and cost effective surfacing.

WASTE MANAGEMENT

As market leaders in waste management, Malcolm Construction re-uses and recycles construction and demolition waste in a safe and cost effective manner, with the minimum of environmental impact.

Our strategically located and fully licensed sites ensure that waste is handled in accordance with current legislation, which typically accounts for around 1 million tonnes of waste per year ranging from construction to hazardous and contaminated waste materials.

We also aim to lead the Construction Industry in the supply of quality recycled aggregates, an objective which has required us to build greater flexibilities into our processes to meet the reaction time expectations of our customers alongside the ever-changing market conditions. In this way we ensure our products are fit for purpose, our services are competitive and our customers are confident in our delivery.

LANDFILL

Malcolm Construction is one of the leading operators of landfill services in Scotland and last year handled over 1 million tonnes of waste at our 5 operational landfill sites. These sites have a consented and operational void of 1 million cubic metres and a further 3 million cubic metres yet to be realised.

“ Malcolm Construction is one of the leading operators of landfill services in Scotland and last year handled over 1 million tonnes of waste at our 5 operational landfill sites. ”

QUARRYING AND AGGREGATE SUPPLY

Malcolm Construction's quarry at Loanhead, Beith, has benefitted from considerable investment in crushing and screening equipment and today produces a full range of bulk fill to single size materials.

In addition to our natural stone offering, we operate recycling depots in both Glasgow and Ayrshire to service the West of Scotland with a full range of recycled aggregates.

Our aggregate wash plant at Shewalton in Ayrshire also allows us to produce a full range of recycled sands and gravels.

RECYCLING

Our construction and demolition waste treatment, transfer and recycling business, is a significant attribute within our service. This comprises 3 facilities specifically geared towards the sorting of recyclable materials to provide high quality recycled aggregates, topsoil and subsoil.

In line with our policy of reducing environmental impact wherever possible, we are actively increasing recycling rates with a view to minimising waste sent to landfill sites.

PLANT HIRE

For more than 40 years Malcolm Construction's Plant Hire division has serviced the Construction Industry, providing the widest range of versatile and reliable machinery, complemented by an experienced crew of fully trained operators.

Both plant and personnel can be rapidly deployed and this full service offering has helped to characterise the "Malcolm way" which has won the trust of our customers and proven to be a cornerstone of our ongoing business relationships.

Current plant includes:

- Various 360° excavators (wheeled and tracked)
- Bulldozers, articulated dump trucks, backhoe loaders and wheeled shovels
- One of the UK's largest fleets of low-loaders and HIABS

Our continuing investment in the most up-to-date plant and site equipment together with our Construction sector expertise gives us the ability to offer our customers practical and cost effective solutions to meet all their plant hire needs.

TIPPER AND SKIP HIRE

We offer an unrivalled haulage and waste collection service to both our direct and indirect customer bases. Our modern, tipper and skip fleet is one of the largest in Scotland, with a range consisting of 6 and 8 wheel rigid tippers, articulated tipping and walking floor trailers (specialist equipment for the movement of bulk waste such as paper and wood) and skips ranging from 8 to 40 cubic yards.

Malcolm Construction's specialist range of equipment also includes:

- Barn door bodies for demolition or armour rock
- Insulated bodies with automatic doors for quarry work
- Steel bodies with automatic doors for earthmoving or demolition
- Ejector trailers
- On-board weighing
- 8 wheel tippers with sleeper cabs
